INTELLI-M ACCESS NVR SOFTWARE FEATURES

Intelli-M Access NVR software is equipped with features and capabilities that make access control and video management simple and convenient:

- ▶ **Rules Engine** The software features a powerful Rules Engine that is now integrated with access control and video. You can use the highly extensible rules engine to create custom rules to single out events defined by you. This enables you to trigger video recording and carry out complex access control functions such as Lock Down, and First In, which simplifies access management.
- ▶ **Unlimited System Resources** Intelli-M Access NVR software supports an unlimited number of schedules, cardholders and access control events—enter as many as you need.
- ▶ **Email Alerts** The IA Access NVR will automatically send an email alert with a text notification when an action-triggered access control or video event has occurred. This provides a record of the event and enables you quickly to take action when an incident occurs.
- ▶ **Reporting** Intelli-M Access NVR software also enables you to create convenient, detailed reports for video events and produce PDF reports of any and all access control data events.
- ▶ **infinias Connect** Connect to your Intelli-M Access NVR using infinias Connect. infinias Connect is a remote client that displays video and data intelligence on a single interface, enabling remote management of both single-site and multi-site systems. Conveniently see events and change the lock status of your facility's doors while searching your recorded video all from the infinias Connect user interface.
- ▶ **Motion Detection** This feature allows you to pre-define zones within the area covered by each camera in the IA NVR so that the NVR only starts recording when motion is detected within the zone. Motion detection recording saves hard drive space and reduces the amount of video recorded; making it easier to find the video you need if there is an event. This feature also enables you to get alerted by alarm and email when there is an incident.
- ▶ **Frame Rate and Video Codec Configuration** Conveniently configure frame rate and video codec of system cameras on the video tab of the Intelli-M Access NVR software.
- ▶ **Groups and Tours** Set up groups and tours. Manage dwell time and camera order directly from the Intelli-M Access NVR software.
- ▶ **Audio Recording** The infinias Intelli-M Access NVR also records audio, with compatible IP cameras that support audio.
- ▶ **Upgrade Software for Even More Access Control Capabilities** Intelli-M NVR software can also be upgraded to Intelli-M Professional or Intelli-M Corporate NVR software to offer even more access control capabilities for your application needs. Upgrade to Professional to add LDAP and Calendar Integration. Upgrade to Corporate to add multi-tiered support of both access and video.
